Thermoflect is a product  
and trademark of  
Encompass Group LLC

## **Thermoflect – A simple warming system using heat reflective technology, designed for medical and other applications.**

### **FACT SHEET**

- Thermoflect is a product of Encompass Group, LLC. Encompass helps healthcare and hospitality providers create safe and comfortable environments for patients, staff, residents and guests.
- Thermoflect is based on technology pioneered by NASA that uses science instead of electricity to prevent hypothermia.
- Thermoflect is lightweight, durable, versatile, cost-effective, and comfortable for patients.
- Thermoflect works by preserving – or banking – a patient’s core body temperature. The innovative Thermoflect material reflects a patient’s endogenous radiant heat, banking it in the body’s core, while preventing convective heat loss (wind chill). Thermoflect’s special silver material is lined with a soft, blue, patient-friendly inner surface.

### **KEY EXECUTIVES**
